

ezRoom PlenumCore

Integrated audio, voice, & networked AV control

Designed specifically for the K-12 classroom, ezRoom is an "everything but the display" solution for administrators looking to provide the best and most reliable AV experience for their teachers and students.

The ezRoom 2x2 PlenumCore and 2x2 lay-in speakers install easily in a dropped ceiling, replacing individual 2x2 tiles. All components are pre-installed in the enclosure, wired, and ready to go.

The networked controller/amplifier provides control of projectors and flat panel displays, and the 32 Watt amplifier covers the classroom in sound for improved student comprehension and performance.

Wall-mount AV plates and control panels make everything accessible for the teacher, and are customizable for just the functions you need.

And because it's connected to the network, ezRoom allows remote management of classroom AV and is ready for Audio Over IP Paging when it's time to upgrade that old paging system.

ezRoom PlenumCore components

CM3000

Network display controller and 32-watt digital classroom audio amplifier

TB14 Power & I/O block

Splits power to other devices so only one outlet is needed

HDMI (optional)

Networked audio controller and 32-watt digital classroom audio amplifier
